## GCE Healthcare rolls out Clarity on its Zen-O lite™ portable oxygen concentrator to customers in Europe

Extending availability makes the Clarity Connected Care remote monitoring platform available on Zen-O lite™ and Zen-O™ devices globally.

**St Helens, United Kingdom, 19<sup>th</sup> June 2020** – GCE Healthcare today announced the launch in Europe of its online monitoring platform Clarity Connected Care on its Zen-O lite™ portable oxygen concentrator (POC) – fulfilling its plans to extend availability worldwide.

Zen-O lite™ with Clarity now carries the CE mark, which shows it passed the Medical Devices Directive conformity assessment for Europe after demonstrating it is safe and performs as intended.

The launch is a significant milestone in GCE's strategy to enable connectivity on the Zen-O™ and Zen-O lite™ portable oxygen concentrators. GCE successfully introduced Clarity on the Zen-O in the US in 2018 and launched the same combination of connected devices in Europe earlier this year. It made Clarity available on the Zen-O lite™ in the US in October 2019.

*Donald Oleforo, GCE's Group Product Manager Homecare, said: "Making Zen-O lite Clarity available in Europe extends the coverage and reach of Clarity on connected Zen-O and Zen-O lite POCs to the US, Europe and the rest of the world. It will give even more home oxygen providers operational and usage information about device performance and the ability to offer enhanced customer service at lower operating costs."*

Clarity uses smart, secure cellular technology and GPS in connected POCs to transmit data, so home oxygen providers can see how well the POC is performing 24/7, from any online device anywhere. Providers can then direct resources where they're most needed and predict maintenance while supporting patients in adhering to their prescription.

The information made available through Clarity includes oxygen purity, usage history, device location, flow and device alerts, and battery life. Providers can also extend remote access to the platform to patients and their families, so they can see usage history and how the connected Zen-O or Zen-O lite is performing. Data is stored and transmitted using encrypted links with best-in-class SSL security protocols.

Extending the reach of Clarity for connected POCs across the world underlines GCE Healthcare's commitment to smart, connected technologies that enable operational efficiency for home oxygen providers and even better care for their customers.

**Notes for editors:**

As part of GCE Group, a world leader in gas control equipment, GCE Healthcare develops and manufactures a range of high-quality, safe and reliable medical gas solutions. It helps healthcare professionals and providers worldwide to meet the needs of patients and to achieve high standards of care. Equipment is designed, manufactured and delivered to the highest standards and complies with applicable quality and regulatory standards.
